Email Credential & Data Leak Managed Service Overview

This is a managed service that provides insight into your domain's potential email credentials and data leak exposure.

With Cygienic's managed service, we employ a proactive and systematic approach to monitor both the surface and dark web for any signs of compromised information related to your company.

Our advanced algorithms scan an extensive array of sources, including forums, social media, and hacker marketplaces, to detect any potential leaks.

In the event of a suspected data or email credential leak, our service promptly alerts your team, allowing for swift response and remediation. We understand that data security is paramount in today's business landscape, and Cygienic is committed to providing you with the tools and expertise needed to stay one step ahead of cyber threats.

"We successfully detected email credential leaks and promptly alerted our team to change system passwords, preventing hackers from exploiting the account information."

-UK University

"We discovered several company confidential documents leaked on the dark web, enabling us to promptly identify the breach and notify our legal teams in a timely manner."

-Singapore Private Equity

Email Credential & Data Leak

Scope of Work

By sharing specific keywords with Cygienic, we can routinely inspect designated locations for potential data leaks. To uncover email credential breaches, we employ our proprietary tool to search global databases."

1. Company Website

Your company's website can unintentionally expose sensitive information, making it vulnerable to data leaks. Regular monitoring and security measures are crucial to prevent unauthorized access.

2. Deep Web

The deep web, where unindexed content resides, can harbour hidden data leaks. Specialized tools and expertise are needed to search and identify such leaks.

3. Paste Sites

Paste sites are often used for sharing code snippets, but they can also be platforms for data leaks. Continuous scanning is essential to detect and address these leaks swiftly.

4. Code Repositories

Code repositories may contain valuable proprietary data. Keeping a watchful eye on these platforms helps safeguard your intellectual property and sensitive information.

5. Public Google Shares

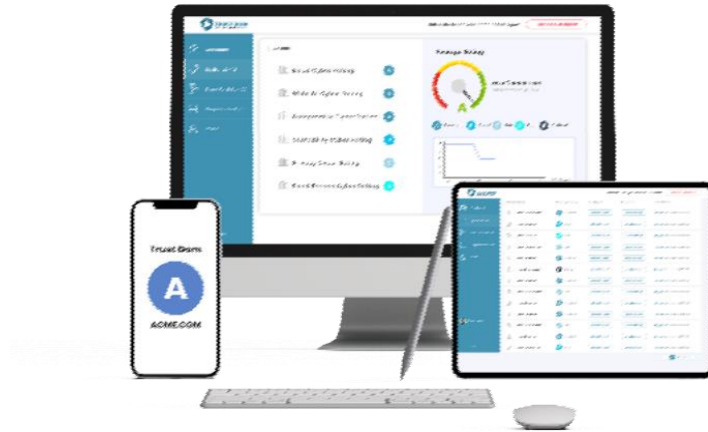

Files stored on publicly shared Google Drive or similar services can be accidentally accessed by unauthorized parties. Implementing proper access controls and monitoring is critical to avoid data exposure.

6. Company FTP Sites

Company FTP sites are essential for data transfer but can also be vulnerable to breaches. Regular assessments and security measures are necessary to protect data stored on these servers.

7. Email Credentials

We provide vigilant monitoring of various online sources to identify compromised email account information.
